

*Case Study LPG boiler change at Budock Water:*

**The Challenge:**

The house in Budock Water needed a full new heating system, the previous system was around 25 years old and not cost effective.

**The Solution:**

Supply and install a Vaillant 28kw LPG boiler, six new radiators, all new gas pipework from the porch area to the boiler location, Honeywell programmable room stat including wiring and a magnetic filter, which helps prolong the life of the boiler.

**The Outcome:**

Trident carried out the full heating system in one week and provided our customer with a new cost effective boiler with an extended 10 years Vaillant parts and labour warranty.

**Mr Parsons, Home Owner said:**

"I would definitely recommend Trident, their price was very competitive. The engineers that carried out the work were friendly, efficient and a pleasure to deal with."
